

Line Up

Read the text carefully and draw lines to match the picture with the text. In the last column, draw an example to demonstrate the text.		
<p>A line is a path that a point takes through space. Lines can be thick, thin, dotted or solid. They can make straight movements, zigzags, waves or curls. They may be horizontal, vertical or diagonal.</p>		
<p>Vertical lines seem to be reaching, so they may seem inspirational, like tall, majestic trees or church steeples.</p>		
<p>Lines can convey emotion as well. They may show excitement, anger, calmness, tension, happiness and many other feelings. Because of this, some lines are said to be expressive. Expressive lines tend to be found in nature and are very organic.</p>		
<p>Diagonal lines tend to be disturbing. They suggest decay or chaos, like lightning or falling trees</p>		
<p>Lines that are very measured, geometric, directional and angular are called constructive or directional lines. They tend to appear to be manmade because of their precision.</p>
